Professional Summary

Data analyst and AI systems builder with experience in Python/SQL data workflows, BI reporting, compliance data validation, AI-assisted document processing, and agent-based analytics prototypes. Interested in data analysis, AI agent development, RAG-enabled workflows, and automation tools that turn messy business data into reliable operational insight.

Skills

- **Programming & Data Analysis:** Python, R, SQL (PostgreSQL, SQLite), Excel, Power BI; data cleaning, validation, exploratory analysis, forecasting support, KPI reporting
- **AI Agents & LLM Workflows:** RAG concepts, Langchain, Claude Code, Codex, Prompt Engineering, AI agent workflows
- **Platforms & Tools:** Git, Odoo, Planview, Red Hat/Linux exposure
- **Languages:** Fluent in English and Mandarin

Education

09/2020 - 06/2025 University of Toronto

BSc in Statistics: Major in Statistics (co-op), Statistical Machine Learning and Data Science stream

Experiences

10/2025 - Present Roamer Pet Utilities Analyst (Part-time)

- **E-Commerce Product Sourcing:** Supported a North American e-commerce business with China-based sourcing and procurement by analyzing best-selling products, customer segments, market demand, supplier quotations, and sample-production options.
- **Supply and Demand Planning:** Used CRM-based customer profile data to identify core product attributes, evaluate product-customer fit, and support quotation, procurement, and logistics cost-reduction decisions.
- **Data Analytics Development:** Developed Python and AI-agent analytical modules to review historical data, forecast monthly demand, estimate potential supply shortages, and refine assumptions for practical business use

05/2024 - 08/2024 & 01/2023-08/2023 GovTechON (Government Technology Ontario) Data Analyst (Co-op)

- **Historical Data Migration:** Supported the data platform team in developing Python-based ETL scripts to migrate user-permission data from the legacy system to the upgraded software governance platform. Conducted multiple rounds of UAT and post-migration validation to ensure data availability and accuracy after go-live.
- **Compliance Risk Management:** Assisted IT teams in collecting and reviewing user access logs from the upgraded system. Assessed data compliance risks and supported user groups in improving role-based access control (RBAC) governance.
- **Visual Analytics Reporting:** Contributed to dashboard design by gathering reporting requirements from project groups and documenting BI visualization needs. Prepared business requirements documents and technical documentation for reporting functions. Developed project-progress KPI reports to support root-cause analysis of delayed tasks and provide optimization recommendations.

05/2022 - 08/2022 XiXin Management Consulting Shanghai Intern

- **Quantitative Analysis Interface Development:** Optimized stock trend analysis algorithms and developed program interfaces for futures quantitative analysis. Processed historical database records through filtering and optimization logic, improving data usability for downstream analysis. Built AI agent workflows to accelerate data ingestion, identify import errors, and recommend improvements to interface functionality.

Personal Projects

05/2026 - 06/2026 AI Document Processing & Optimization of Production Scheduling Strategies Freelance

- **Automated Document Processing:** Built an automated document-processing workflow for Thai and English receipts/invoices with non-standard document formats using a locally deployed multi-modal LLM, regex extraction, and LLM-based verification.
- **LLM Cost vs Accuracy:** Balanced extraction accuracy and cost by combining model-based OCR with deterministic pattern matching, achieving 90%+ extraction accuracy while reducing unnecessary token usage.
- **Production Scheduling Optimization:** Translated production-scheduling pain points into optimization requirements, including multi-process coordination, urgent order insertion, order-priority locking, capacity bottlenecks, and soft/hard constraint handling. Built on open-source scheduling algorithms to design constraint strategies and tune optimization weights using historical production-scheduling data.
